ROTARY PADDLE LEVEL SWITCH –SCSS-RPLS07

Description

Paddle switch is designed to detect high or low levels of free-flowing dry Solids, such as powders and granules. It is mounted through the wall of a vessel such that the paddle protrudes inside the vessel.

Operation

A small electric motor drives the paddle, which rotates freely in the absence of material. Impeded by material the motor will be turned within the housing while loading a spring and triggering two switches. One of them is a dry electric contact for control and alarm functions while the other cuts the power to the motor. When the material level drops, the loaded stretched tension spring returns the motor to its original position and the unit is reactivated.

Specification

Enclosure	: Weatherproof /Flameproof, Cast Al.
Insertion	150mm to 3000 mm
Max. Temperature	: Upto80°C, others on request (230°C)
Maximum Pressure	: Up to 2 Kg/cm ²
Speed	: 1 RPM
Supply	: 230 V AC,/110 V AC
Switch Contact	: SPDT 5A@230VAC
Mounting	: Side/Top
Process Connection	: Flange /Thread

Features

Appropriate operating torque to suit service material, can be set through adjustable spring inside the housing. Motor operating the paddle is protected from overload by means of magnetic clutch.

Flexible spring shaft for absorbing material shocks.

Protection shield for horizontal/inclined installation for protection of paddle from material flow/dumping.

Two bearing shaft assembly for reduced wear and increased reliability.

Ash seal assembly for dusty environment.

Application

Plastic molding machine, Sand hopper, Blending devices, Tube conveyor devices, Crusher, Rice cleaning machine, Grain Treatment machine, Spray dry, milling machine.
